

Course: **Advanced Welding Techniques**
Course Number: CGTCADVWELD1120
Course Length: 1-8hr day
Class Size: Varies

Course description:

This course is designed to provide a hands-on practical approach to welding for experienced welders seeking improvement in specific areas.

The instructor will offer examples, along with individualized feedback and critiquing to help participants correct common mistakes and learn correct welding methods and procedures that may vary from one student to the next. Some examples among the commonly challenging areas students can practice in are Magnesium and Aluminum welding. Upon completion of this course the student should be able to produce a sample that will pass an X-Ray certification test.
